## Laundry

The presentation and cleanliness of linen is an indispensable part of hospitality. With chlorine being expensive and sometimes harmful, many commercial and institutional laundries are switching over to ozone to maintain their linen.

Ozone is an economical and environment friendly alternative and can be added to any generator of an existing laundry without installation expenses. It fights candida albicans, athlete's foot, molds, mildews, yeasts, and even mushrooms.

Even a low concentration of ozone can reduce and even eliminate bacteria growth. This increases the longevity of your linen, cuts odour and removes stains. With lower energy consumption, less water and detergent usage, it is the most economically viable option.
